

National Surveillance Centre Dashboards and Monitoring Medicine Availability

Amanda Brewer

**USAID Global Health Supply Chain Technical
Assistance Programme**

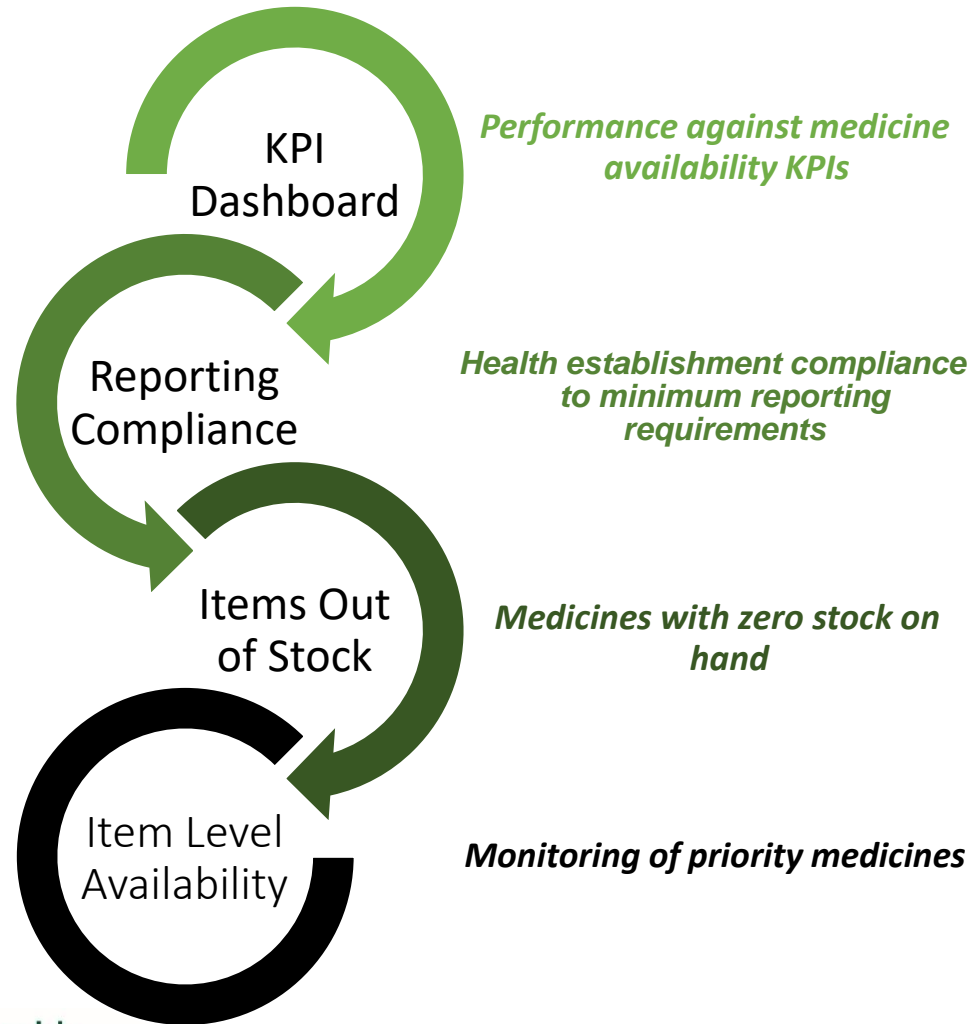

National Surveillance Centre Dashboards and Monitoring Medicine Availability

- The **National Surveillance Centre** provides **visibility** of medicine availability (<https://medssc.co.za/>)
- KPIs at **health establishment, district, provincial level, national and supplier level**
- Data visualised from the **Stock Visibility System, RxSolution, Warehouse Management Systems**, electronic stock management systems in use by suppliers and other sources
- Provides **updated information to enable evidence-based decision making** to support medicine supply management and medicine availability
 - **Identification and mitigation of supply chain issues**
 - **Effective implementation of stock-out escalation protocols**

National Surveillance Centre Dashboards and Monitoring Medicine Availability

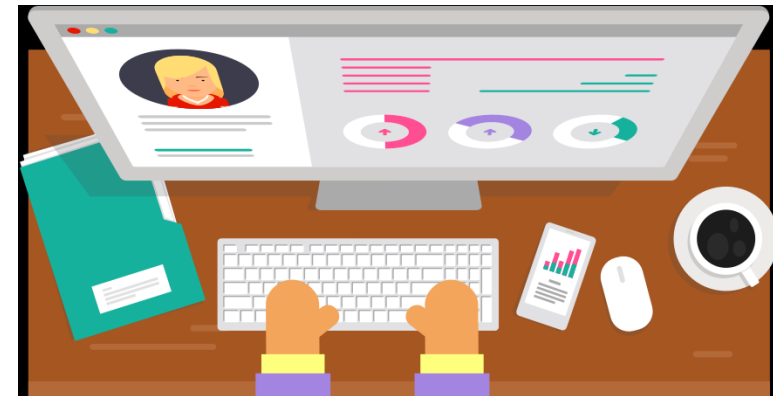

Examples of views that should be monitored:

PTCs should monitor dashboards at least weekly to identify supply interruptions at health establishments.

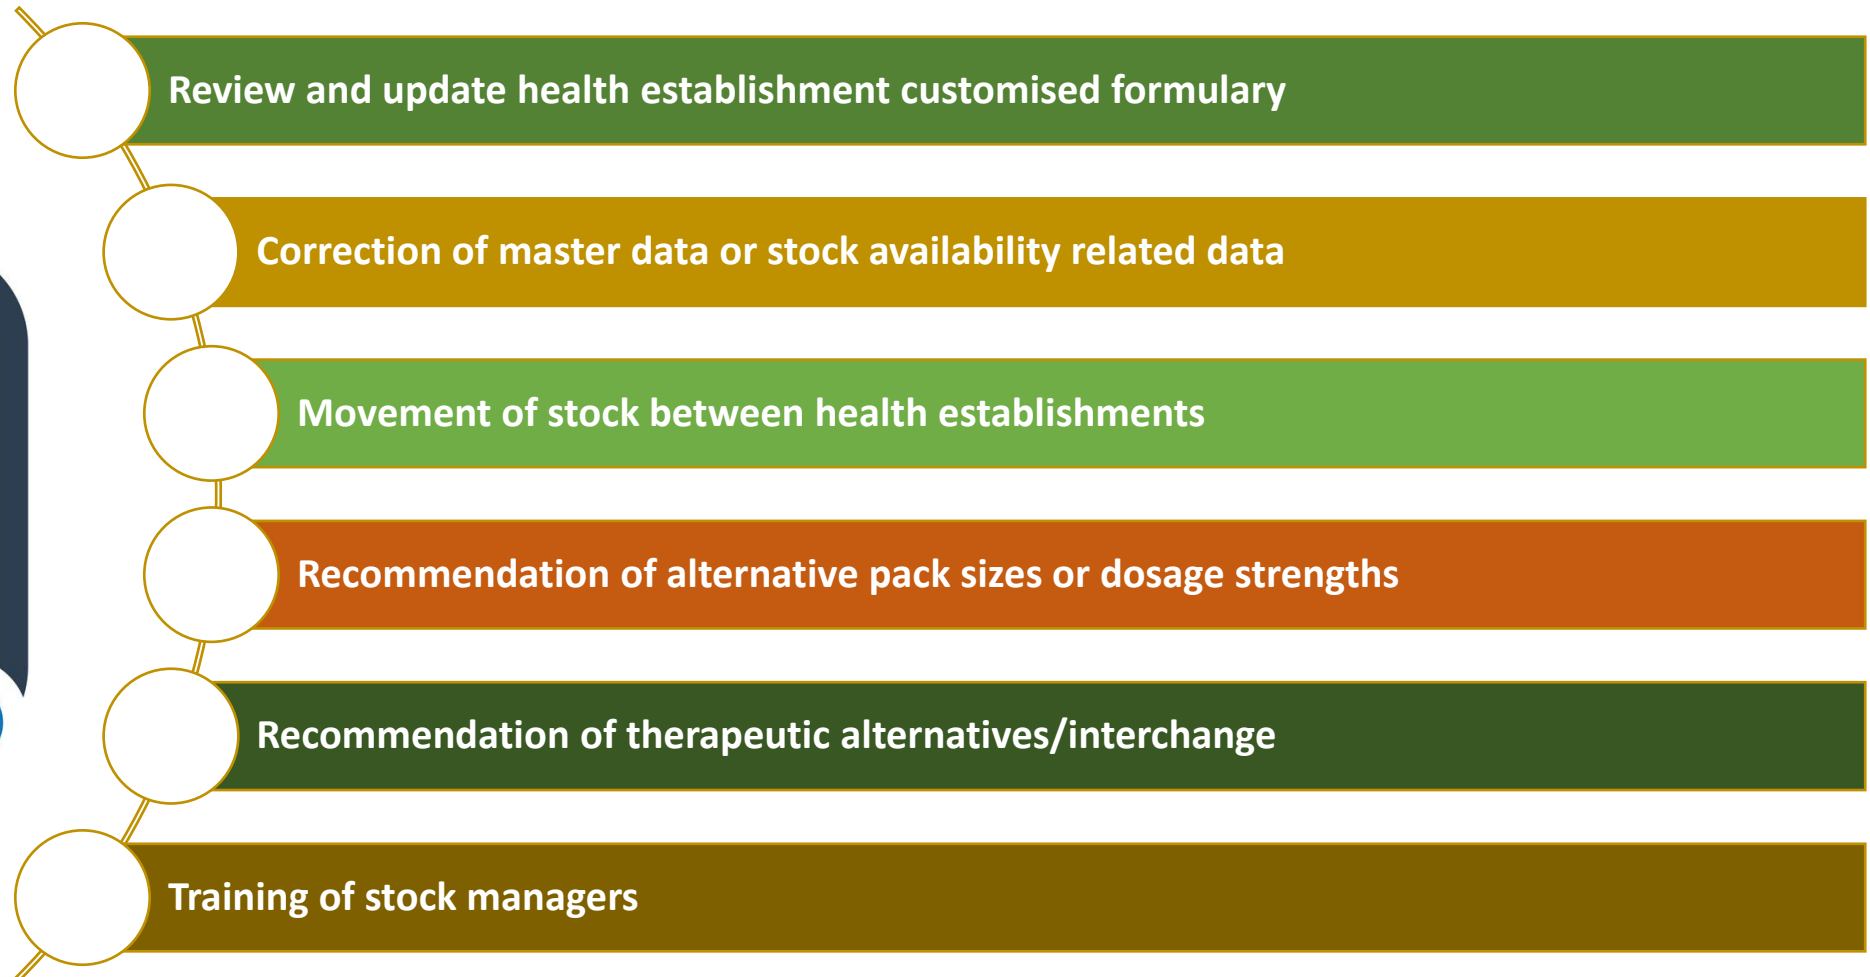

What to look out for:

- Items out of stock
- Stock below minimum level
- Average stock levels
- Supplier pipeline for stock

National Surveillance Centre Dashboards and Monitoring Medicine Availability

Root cause of identified challenges - implementation of corrective and preventive interventions

Thank you
