

# DOLUTEGRAVIR (DTG) FOR ALL WOMEN

Take one tablet,  
Get healthy &  
Stay healthy

U=U [Undetectable = Untransmittable]  
Your viral load will be suppressed  
quickly and for longer.

Dolutegravir is available as a fixed dose combination  
with Tenofovir, Lamivudine & Dolutegravir (TLD)

Now available as part of 1st and 2nd line  
treatment to all women living with HIV  
including during pregnancy.

## Benefits

- One tablet once daily
- **No significant difference in birth defects** compared to other ARVs.
- No drug interactions with contraception.
- **Superior efficacy and faster rate of viral suppression:** the virus will not be detected in your blood.
- Well tolerated: **fewer side effects.**
- **High genetic barrier to resistance:** it's difficult to fail this treatment.

## Who qualifies?

- All women living with HIV whether on family planning or not.
- All pregnant women living with HIV regardless of pregnancy duration.
- All adults, adolescents and children with weight  $\geq 20$  kgs living with HIV.
- Talk to your health provider for an assessment.
